

SYMPOSIUM PROGRAMME

Medical compression stockings for venous disorders and diseases - Original studies presented by the Authors

Short presentations, each 6 min. - discussion after each round

Moderators: E.Rabe, H.Partsch, M.Perrin

Medical compression stockings for venous disorders

Chairmen: E.Rabe, M.Perrin

- E.Rabe: Inappropriate use of medical compression stockings - data from the Bonn Vein Study
- P.Kern: Medical compression stockings after interventions on varicose veins
- F.Amsler: Meta-analysis of medical compression stockings for patients with venous disorders
- W.Blättler: Medical compression stockings for occasional leg symptoms

Medical compression stockings for venous ulcers and other severe venous diseases

Chairmen: J.J.Guex, H.Partsch

- E.O.Brizzio: Moderate strength medical compression stockings for the treatment of recalcitrant venous ulcers are not inferior to multilayer short-stretch bandages
- F.Mariani: RCT comparing a double stocking system (Ulcer X) with bandages
- F.Amsler: Meta-analysis of studies comparing medical compression stockings with bandages
- W.Blätter: Analysis of risk factors relevant to choose compression therapy for venous ulcers
- P.Humbert/
E.LeFloch: Determinants of donning convenience of medical compression stockings
- D.Rastel: Survey on how patients use their medical compression stockings
- J.J.Guex: Experiences by doctors and patients of medical compression stockings 20-35mmHg
